(See mono widening.) It is a re-creation of the original guitar EQ from tape plugins like the Livid Audio Roadie [ This EQ has a tendency to add depth to a sound. You can use this EQ to expand your range, adding clarity and power to your sound. The EQ works in two modes, the "dry" mode, which is for adjusting the sound before recording, and the "wet" mode, which is for the actual recording. + There are two settings for each band, left and right. You can use the left band on one channel of your mixer, and the right band on the other channel of your mixer. For example, you can use the left band with the mic and the right band with the instrument. This allows you to get a more natural stereo image, and avoid the sound quality that comes with panning a mono signal with the panning effect. ==Sound characteristics== \*Each band will alter the frequency range of the sound. In general, the farther you get from the center, the lower the frequencies will be affected. The bands affect the frequencies closest to the center the most. \*By adjusting the center frequency, you can stretch the spectrum of a frequency range. This can make the signal more defined. The wider the band, the more defined the sound. If you use the EQ dry, you should give a band and center frequency that you like for the sound. \*Because you are changing the band from mono to stereo, you are not going to get the frequencies that are in the mono and stereo center. In general, this will be a low frequency mono tone. If you are trying to make a mono sound sound like a stereo sound, and not the other way around, you should try a mid frequency mono tone. – The stereo width enhancer has two settings: left and right. When this EQ is used in the "wet" mode, it will cause the two channels to become slightly out of phase. The closer together the bands are, the further out of phase the two channels will be. The further apart the bands are, the closer to in phase the two channels will be. In general, if you are trying to make a mono sound sound like a stereo sound, and not the other way around, 82157476af
